6. Thank you

OVERVIEW

Our data is about macroeconomics. It includes unemployment rate, literacy rate and GDP of all countries from the year 1991 to 2021. Unemployment, according to the OECD (Organisation for Economic Co-operation and Development), is people above a specified age (usually 15) not being in paid employment or self-employment but currently available for work during the reference period . Gross domestic product (GDP) is a monetary measure of the market value of all the final goods and services produced in a specific time period by a country or countries. GDP is most often used by the government of a single country to measure its economic health . Literacy rate is a key for social-economic progress. Literacy in its broadest sense describes "particular ways of thinking about and doing reading and writing with the purpose of understanding or expressing thoughts or ideas in written form in some specific context of use.

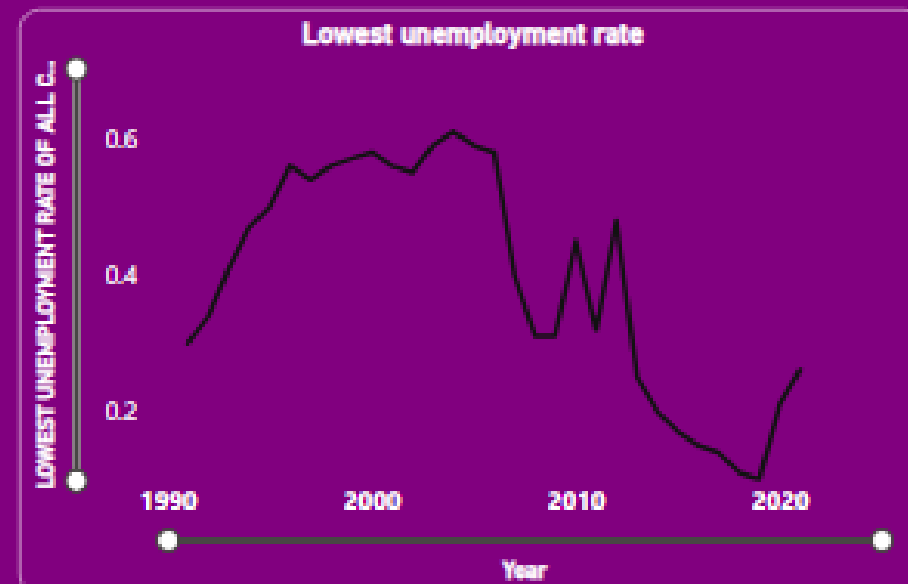

KPI's

1. **Average unemployment rate of all countries**
2. **Average unemployment rate of India, China and Singapore**
3. **Average literacy rate of India, China and Singapore**
4. **Average GDP rate of India, China and Singapore**

INSIGHTS

- By our analysis we can note that India was falling back in comparison with China and Singapore when it came to factors like GDP and Literacy rate.
- But as far as Unemployment is concerned, India and China ranked the highest.
- All the 3 economic factors were evidently effected in the year 2020 due to the outbreak of the Covid-19
- This analysis gives us an understanding on know big of an issue unemployment is in the world's most populated countries which is India and China.
